

DOLYNSTER SIDOROV

AI DEVELOPER | SaaS, Business Platforms & Automation

Email: dolynster@gmail.com | WhatsApp: +1 (920) 309-6223 | Telegram: @dolynster

PROFESSIONAL SUMMARY

A highly skilled AI developer with 10+ years of experience in developing and deploying production AI systems end to end. My expertise lies in Generative AI, RAG, and Data Science, where I create scalable, innovative, and impact-driven solutions that enhance business efficiency and drive growth.

As a business-oriented software engineer, my aim is to help startups and SMBs turn ideas into production web applications.

CORE TECHNICAL EXPERTISE

- Front-end:** React/Next.js, TypeScript, JavaScript, Tailwind CSS
- Back-end:** Python, Node.js, Express/NestJS, FastAPI/Django, REST APIs, webhooks
- Database:** PostgreSQL, MySQL, MongoDB, Redis
- DevOps & Cloud:** Git/GitHub/BitBucket, Docker, Kubernetes, CI/CD, AWS, GCP, Azure
- AI Integrations:** LLM integration(OpenAI, Claude), RAG pipeline, LangChain, NLP

SELECTED PROJECT EXPERIENCE

AI Copilot for Analysis & Reporting in Finance Saving \$1M | AI Strategy Consultant & Solutions

Architect

- Designed the strategy and technical architecture for a proprietary AI copilot supporting an enterprise finance team.
- The system centralized internal financial knowledge, accelerated document analysis, and assisted with research, reporting, and decision support.
- The solution combined secure RAG, structured outputs, source citations, role-based access, and human review to improve productivity while maintaining financial accuracy, governance, and auditability.

40% Time Decrease by LLM-Powered Workflow Automations in Healthcare | AI Automation & Agent

Developer

- Designed and implemented an LLM-driven workflow automation system for a healthcare team managing high-volume administrative processes.
- The solution automated document review, information extraction, classification, routing, and follow-up tasks while preserving human oversight for sensitive decisions.
- This reduced administrative workload by 40%, improved processing consistency, and allowed the team to focus more time on patient-facing and higher-value operational work.

SELECTED PROJECT EXPERIENCE — CONTINUED

AI Business Transformation for \$2B AUM Private Equity Firm | *Lead AI Agent Developer*

- Led a full-cycle AI transformation for a mid-sized company, identifying high-ROI automation and AI opportunities across operations, customer engagement, and decision-making.
- Designed a roadmap for AI adoption, developed custom generative AI tools, and guided the leadership team through implementation.
- As a result, streamlined workflows, improved productivity by 35%, and created new revenue channels using data-driven insights.

AI-based Services and Products for Clinical Trial Design | *Principal AI Data Scientist*

- Built their internal clinical trial understanding system, ingesting, processing, embedding, and indexing 15k+ public clinical trials, for Q&A, chat, and benchmarking, internal trial design efforts, and optimization.
- Large-scale data pipelines leveraging advanced techniques in PDF parsing and multi-index / multi-LLM RAG.
- Created the first data-backed GenAI-based trial protocol writing product to generate 80% of the M11 clinical trial protocol document (100+ pages), including multi-agent validation, consistency, and styling checks, and accurate adherence to data.

Real- Sales Recruiting Brand & Candidate Application Portal | *Full Stack AI Developer, Next.js build, application intake, validation and deployment*

- I built Real's platform in Next.js around two separate conversion paths: clients start a hiring conversation, candidates apply through a structured intake flow with role, experience, location, source tracking, international phone handling and resume upload fully validated client side before submission and routed straight to the hiring team.
- Three service lines, eight industry verticals and the full company section all render from one typed, responsive component system.

DELIVERY STRENGTHS

End-to-end ownership: Requirements, UX, architecture, implementation, testing, deployment, and iteration.

Production discipline: Secure authentication, role-aware access, validation, error handling, maintainable APIs, and documentation.

Client collaboration: Clear progress updates, practical technical guidance, and reliable post-launch support.

EDUCATION

MSc, Computer Science | The Hong Kong University Of Science and Technology, 2013 - 2017
